EDUCATION

Muthoot Institute of Technology and Science

Ernakulam, Kerala

Bachelor of Technology in Computer Science

EXPERIENCE

Harmony AI

Apr. 2026 – Jun. 2026

Software Engineer - Contract

Remote — United States

- Developed a **supply chain inventory forecasting system** for manufacturing clients, combining Infor supply, demand, and burn-rate data to improve material planning visibility
- Built a **custom SQL Server CDC data replication service** for PostgreSQL mirrors, replacing managed Estuary sync pipelines to reduce infrastructure cost while preserving data parity
- Technologies: **TypeScript, Hono, React, Drizzle ORM, PostgreSQL, Docker**

OddsView (YC W24)

Jun. 2025 – Dec. 2025

Software Developer

Remote — New York, United States

- Built a high-throughput async Python scraper for 1xBet with **sub-2s** latency across 8+ sports and 50+ leagues, adding **parallel fetching**, lifecycle automation, and **Prometheus metrics** for real-time arbitrage detection
- Refactored **AWS CDK** from a monolithic stack into modular deployable units, reducing deployment time by **70%**, improving infra maintainability, and enabling faster service-level iterations
- Replaced **Kafka ingestion** with **gRPC streaming** using **Protocol Buffers**, connection pooling, and **intelligent batching**, cutting ingestion latency by **40%** and simplifying the distributed system architecture
- Developed a **FastAPI Service** aggregating livegames metadata with **Redis-backed** data storage, reducing EV/arbitrage compute cost by **60%** via controlled 1/sec market scans and backend-side metadata consolidation
- Technologies: **Python, FastAPI, gRPC, Protocol Buffers, Redis, AWS CDK, Docker, Prometheus**

YouseAI

Oct. 2024 – Jan. 2025

Software Developer Intern

Delhi, India

- Improved on-boarding engagement by **40%** with password-less login and optimized first-time user flows
- Reduced avatar creation time by **60%** through **Azure Storage**-based preset models implementation
- Added product analytics with **PostHog** and fixed 15+ front-end bugs across key user workflows

PROJECTS

LoopAutomata | *Next.js, Express, PostgreSQL, Redis, BullMQ, Python, R2/S3*

Feb. 2026 – Apr. 2026

- Built an **AI video operations platform** that moves project briefs through **script review/editing**, scene generation, storyboard editing, rendering, video review, and publishing workflows.
- Designed a **queue-driven media pipeline** with **Redis/BullMQ** and **Python workers** for script, asset, scene, stitch, and thumbnail jobs, including **SSE progress**, retries, stale-job timeout handling, **R2/S3 asset storage**, and credit escrow/refunds.

GradeIT | *Next.js, Tailwind CSS, Prisma, PostgreSQL, Judge0, Groq*

Jan. 2025 – Mar. 2025

- Developed an automated code grading platform, reducing manual grading time by over **70%** through secure **sandboxed execution**, multi-language evaluation, and **LLM-based** test case generation.
- Built **real-time dashboards**, implemented **Google OAuth authentication**, and added **role-based access control** for faculty and students, improving usability, observability, and evaluation accuracy by up to **90%**.

TECHNICAL SKILLS

Languages: TypeScript, Java, C, Python

Frontend: React.js, Next.js, Tailwind CSS, HTML, Recoil.js

Backend: Node.js, Express.js, Hono.js, WebSockets, Auth.js

Database: MongoDB, MySQL, PostgreSQL, Redis

Cloud & DevOps: Docker, AWS EC2, AWS S3, Cloudflare Workers

Tools & Concepts: GitHub, Prisma ORM, Drizzle ORM, REST APIs, OOP, Agile methodologies

Distributed Systems: Streaming RPC, Concurrency, Backpressure, Queues, Microservices
